

Commercial AD

Facility Type:	Project Finance & Long Funding Lease
Sector:	Renewable Energy
Asset:	Industrial Anaerobic Digester
Value:	£28,000,000

Taking a development project through credit due diligence, covering off the EPC delivery contracts, O&M provision, feedstock contracts into financial close and build out. Total gestation period around 18 months from first contact to completed build.

Key issues in this type of project are to ensure the documentation around all facets of delivery to commissioning are commercially fit for purpose and ensure the client gets a product which does what it should. Waste feedstock for this plant was predominantly a range of human food waste much of which has a high energy content but requires quick and effective disposal.
